- Lightweight for ease of carrying
- Colour: RAL 9010
- Fits 600mm low level wall
- W:1042mm x H:472mm x D:100mm
- Weight 7.3kg

Advanced Radiant Technology

For a warm, comfortable environment that doesn't cost the earth to heat, advanced radiant panels are an energy-efficient and a cost-effective choice. Simple-to-operate. Our panel heaters are low-cost to install and economical to run.

Radiant panels work like the sun, heating up the objects in their path, which in turn act as convectors giving off warmth. This results in an even natural heated environment from head to toe so that people don't lose warmth to their surroundings. It makes our radiant panel heaters ideal for providing heat in low insulation areas, infrequently used rooms or as back-up heating when the temperature drops below comfort requirements.
